Log it!

You can type `git log` to see what you've done so far:

If your terminal is showing a `:` after typing `git log`, that means there are more pages of commits to review. You can either type `<space>` to go to the next page or `q` to quit.

In this section, we've reinforced the concept of making changes to our project, adding changed files to staging with `git add`, and committing those changes with `git commit`.
