Knowledge Check

`cp ~/documents/lasagna_recipe.txt` is not working properly. What might be a possible reason for its failure?

Select the best answer.

- ☐ The `cp` command cannot be applied to `.txt` files.
- ☐ There is a universal bug among all programming languages in which the letter combination of “lasagna” cannot be compiled and interpreted. 
- ☐ `cp` by itself is not a command — it is a command flag and needs to be associated with an actual command.

- ☐ The command `cp` takes two arguments and only one has been specified here. 

Recall that we can think of `cp` as “copy/paste.” Without specifying a target location, however, we cannot complete the action of pasting `lasagna_recipe.txt`.
