Knowledge Check

Say you wanted to copy a file from one location, create a new folder in another location, paste the file into that new folder, and then delete the original file. Which of the following lists of commands is in the correct order to achieve your desired results?

Select the best answer.

☒ `mkdir` > `cp` > `rm`

Correct: First, `mkdir` the new directory, then `cp` the file to the desired location, and finally, `rm` the old file in the original location: `bash mkdir new_foldercp old_folder/target.txt new_folderrm old_folder/target.txt`.

☐ `c` > `mkdir` > `p` > `rm`

☐ `cp` > `mkdir` > `rm`

☐ `mkdir` > `rm` > `cp`
