Types of Text Files

Text editors can understand, interpret, and edit a wide variety of text files. Examples include:

- Plaintext (`.txt`)
- Markdown (`.md`)
- CSV (`.csv`)

They also allow you to write in various programming languages, each of which have their own sets of rules, keywords, operators, and syntax. With text editors, you can compose scripts for languages such as:

- Python
- HTML/CSS
- JavaScript
- Ruby
- SQL
