GitHub Enterprise

Most of this course's materials are available on General Assembly's GitHub Enterprise, which you can access via cloning, forking, and pulling.

It's important to remember that each group or company's GitHub Enterprise (GHE) functions as its own entity. So, for instance, if Google invited you to join its GHE, you would need to create a new account for Google's GitHub Enterprise even though you already have one for General Assembly.

Within each GHE, you create an individual account and through it your own workspace, or **repository**. Other people can view the copies of your repositories (repos), but they won't be able to contribute to them without your permission.
